

International Training Institute-Goroka

Diploma in Information Technology (DIT-S12 & S2)-2026

Web Design Major

Assignment#2

Name: Korizu Yule ID:25112276022

Due Date: Week 15,13 November 2026-Friday

Table of Content

Page	Content

Purpose of the Website

The purpose of my website is to create a professional personal portfolio that introduces me, showcases my education, skills, hobbies, projects and achievements. The goal is to help potential employers, clients, classmates and other visitors learn about my abilities and experience.

Target Audience

My target audience includes potential employers, companies, clients, teachers, classmates and other people interested in my work. The website is designed for teenagers and adults of any gender, especially people interested in web design and information technology.

Information

The most important information includes my biography, education, CV, skills, technologies I know, projects, hobbies, achievements and contact information. This allows visitors to understand my background and abilities.

Multiplatform Display

The most important information includes my biography, education, CV, skills, technologies I know, projects, hobbies, achievements and contact information. This allows visitors to understand my background and abilities.

Wireframe

The website will have 6 main pages: Home/Portfolio, About, Education, Hobbies, Project and Contact. The pages will be organized through a navigation menu. The Home page will introduce me and provide an overview of my portfolio. Education will show my educational background, and CV. Hobbies will describe my hobbies. Project will show my first ever mad project which is this one Contact will provide my contact information and a contact form.

A hierarchical hub-and-spoke structure is appropriate because the Home page acts as the main hub and links to the other pages.

Graphics

I will use a professional profile picture, photographs related to my hobbies, project images, simple icons and other relevant images. The graphics will support the content without making the website too crowded.

Colour

I will use a clean and professional colour scheme with maroon, white and dark text, with small accent colours where appropriate. The colours will create a friendly and modern personal brand while keeping the text easy to read.

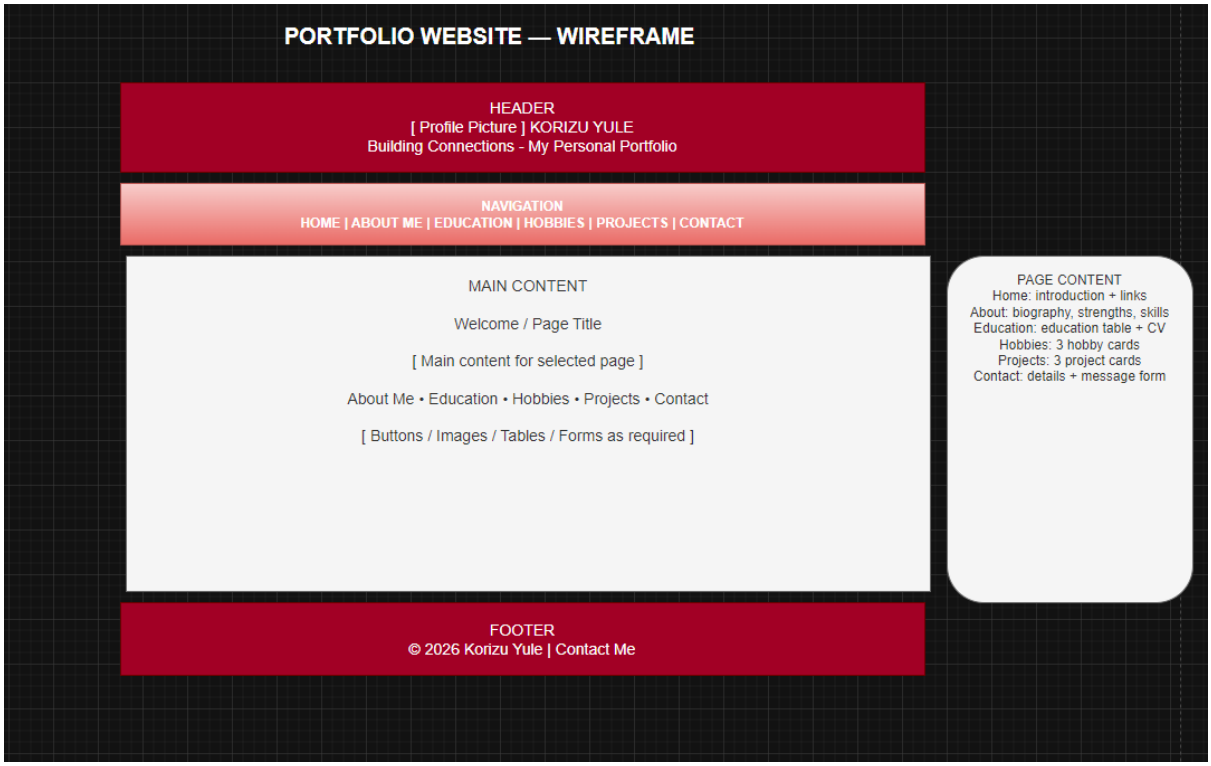

Topography

I will use a clean sans-serif font for the main content, such as Calibri or Arial, with a larger modern font style for my name and headings. This will make the website easy to read on both computers and phones.

Accessibility

I will use clear text, readable font sizes, good contrast between text and background, descriptive alt text for images, properly labelled form fields, clear navigation and a simple layout. The website will also be designed to work on different screen sizes.
